THIS DOCUMENT CONTAINS INFORMATION AFFECTING THE NATIONAL DEFENSE OF THE UNITED STATES WITHIN THE MEANING OF THE ESPIONAGE ACT 50 U.S.C. 31 AND 32, AS AMENDED. ITS TRANSMISSION OR THE REVELATION OF ITS CONTENTS IN ANY MANNER TO AN UNAUTHORIZED PERSON IS PROHIBITED BY LAW. REPRODUCTION OF THIS FORM IS PROHIBITED.

25X1

At about 0930 on 22 April 1957, two frigates of the RIGA Class were berthed in Sassnitz harbor. Coastal protection boats [ ] which were presumably of construction series III with two shears in the deckline, and six mine-laying and mine-sweeping HABICHTs [ ] were also seen in the harbor. The frigates of the RIGA Class were described as follows: four mast antennas, each about 2.5 to 3 meters long, aft of the "tub" forward of the aft guns. The semi-circular radar screen at the mast did not make a 360° revolution but swung about 180° 20 times per minute. Several parallel rods located somewhat forward below the screen were also seen rotating. The masts of the RIGAs were painted white from the top upwards. A torpedo tube mount with two tubes was fitted between the stack and the "tub". The tubes had a caliber of apparently less than 53 cm. The torpedo mount was moved either electrically or by means of electric-hydraulic devices. [ ] The HABICHTs were not fitted with radar screens.

Comment. The occupation of Sassnitz is normal. It is doubted that the RIGAs are fitted with a twin-tube torpedo mount with tubes of a caliber less than 53 cm. The regular outfit is a three-tube torpedo mount with 53-cm tubes.

APPRAISAL OF

At about 0930 on 22 April 1957, two frigates of the RIGA Class [redacted] were berthed in Sassnitz harbor. Coastal protection boats [redacted] which were presumably of construction series III and had two shears in the deckline, and six mine-laying and mine-sweeping HABICHTs [redacted] were also seen in the harbor. The frigates of the RIGA Class were described as follows: for mast antennas, each about 2.5 to 3 meters long, aft of the "tub" forward of the aft guns. The semi-circular radar screen at the mast did not make a 360° revolution but swung about 180° 20 times per minute. Several parallel rods located somewhat forward below the screen were also seen rotating. The masts of the RIGAs were painted white from the top upwards. A torpedo tube mount with two tubes was fitted between the stack and the "tub". The tubes had a caliber of apparently less than 53 cm. The torpedo mount was moved either electrically or by means of electric-hydraulic devices. [redacted] The HABICHTs were not fitted with radar screens.
